

Gear Couplings - Series G

Modern toothing production
achieves reduced backlash

Bores made in accordance
with AGMA 9002-C14

Hubs 3D
crowned toothed

AGMA 9008-B00 conformity
up to size 0090

Nominal torques
over 2,695,000 lb-in

torsionally rigid

Your benefit

- >> Long toothed sleeve compensates for larger axial displacements
- >> Fully crowned hub teeth enables reliable torque transmission with simultaneous compensation for misalignments
- >> Compact design
- >> High torque density
- >> Many customizable options available
- >> Design with single side rigid hub available
- >> Interchangeable industry standard
